

Hotline-Support KOSY/MCS

Category 3: **Software nccad9**

Description: **What is missing in nccad9 compared to nccad6/7.x**

General notes

If something is missing, according to you, ...

- it is perhaps replaced by other functions.

What is really missing

A list from date of January 2015.....

- **Generator of mathematical functions**
If anyone needs it please feel free to contact us.
- **Step boring**
It was too unflexible. Now you draw 2 concentric circles in the same group and give both circles a group technology without *Infeed tot/part*, possible even without F-values. The missing parameters are given to the individual circles taking into account the different conditions for the small/deep and the big/flat boring.
With the small boring you can enter the lower *Start height* (tab *Technology/Condition*).
- **Hatch**
lis in work even in connection with *Fill*.
- **Elements of documentation are missing**
e.g. the parts *FileName*, *Date*,... in the icon group *Documentation*. Some were replaced by the window *Notes* in *Save as*.
- **Templates**
Many users replace them by their own sourcefiles. It is helpful to lock the groups belonging to them.

Please feel free to contact us if you really miss something. But check first the other Hotline leaflets concerning the topic, perhaps we have replaced the function by another, maybe better one..

By the way, it may even be necessary to **download the latest version**. See **Download** on our HomePage www.max-computer.de.
